Dr. Belongia, a long-standing member of the NEMSN Medical Advisory Board, is a physician and infectious disease epidemiologist at the Marshfield Clinic Research Institute in Wisconsin. Since this presentation is meant to detail the Covid-19 pandemic to other doctors, medical residents in training, medical students and researchers, some of the material is quite technical. However it also offers an excellent explanation to the lay person of how we get infected and how the current vaccines might work to overcome SARS-Cov-2 infection. This updates information in the article on the pandemic and EMS patients that Stephen Naylor Ph.D. wrote for NEMSN's June 2020 newsletter. Special thanks to the Marshfield Clinic Health System for this video link.
